Subject: Draft Cross Sections for Grenada
Attachments: CROSS SECTION PLANVIEW.pdf; CROSS SECTION A.pdf; CROSS SECTION B.pdf

Dave,

Attached is the cross section layout map for the sections that will be included in the 2012 Supplemental Report and the two sections that go through the MW-20 Area. We have been looking more specifically at the sand zone that exists in the vicinity of VP-3 and VP-5 and wells that we have in the general area of the EQ Basin. It looks like we do have a pathway from the main site to the MW-20 Area, but it varies based on the water table elevation and quite a bit from boring to boring. The additional borings proposed for this area will add a lot to the picture. I think I have also identified a mechanism for moving the soil gas over to the MW-20 Area.

We can talk about this in detail on our call later today.

Thanks,

James Peebles, PE
